

Adult Dental Coverage in Medicaid will Save Money and Improve Health

Medicaid does not currently include comprehensive dental care for adults; providing this benefit will help the Commonwealth realize cost savings related to reduced emergency department (ED) use, chronic disease management, and a reduction in opioid prescribing.

**Please Support a Budget Amendment to Fund a Medicaid Adult Dental Benefit.
Doing so will:**

Reduce Avoidable Emergency Department Visits

- A study from the Virginia Department of Medical Assistance Services found in 2018 nearly 16,000 Medicaid recipients visited the emergency department roughly 19,000 times for dental related issues.
- Virginia spent \$3.31 million on 12,617 visits to the ED for dental-related pain and infection - no treatment is provided in the ED; if these adults had a dental benefit they could seek care and treatment in an appropriate dental setting.
- One urban hospital in Virginia spent \$1.4 million on 889 ED visits; no treatment was provided, only assistance with pain management and infection.

Improve Chronic Disease Outcomes and Save Money

- People with gum disease are at increased risk of developing cardiovascular disease, and diabetes and of having a stroke
- Dental treatment improves chronic disease outcomes and saves money; when a diabetic's dental disease is treated they visit the hospital 39% less, visit the doctor 13% less and save \$2,840 in annual medical costs compared to diabetics with dental disease.

Reduce Opioid Prescribing and Improve SUD outcomes

- 56% of the Medicaid beneficiaries who visited the ED for dental issues filled an opioid prescription within 30 days at a cost to Medicaid of \$121,269.
- Individuals enrolled in a SUD treatment program who received dental treatment were found to be twice as likely to get a job on discharge; twice as likely to abstain from drug use; 1/3 less likely to go into homelessness compared to the group who did not receive comprehensive dental treatment

Improve Overall Oral Health

- Over 50% of Virginians without dental coverage put off seeing a dentist because of cost.
- 54% of older adults cited dental care as their second-most frequent unmet need.
